UNDERSTAND

« *Water is not a commodity; it is a common good that belongs to Humanity and all life* » ONU déclaration - july 2010

This common good cross watershed territories, back and forward, carrying urbanisation impacts or uncontrolled industrial agriculture.. Acting sustainably on the ressources protection, it's to understand the whole interactions meaning. NGO Bleu versant first act is to re-learn the fondamental links between the water and the territory. In a pragmatcal and funny way, the NGO propose pedagogical workshop* territorialized (adapted to each territory, each school). These workshop allow to re-discover how this process works and to understand the challenge to take in account this ressource in the daily territory management and planning. Finally, through the principle of twin towns and co-development implemented in the NGO actions programs, all schools, in France and abroad with investees in these workshops will discuss the long-term their point of views and experiences. The perception of international water issues may well be seen in a simple, human solidarity.

GET AWARE AND SHARE IT

Who really knows the water sustainable resource management stakes at the watershed level? Some technicians, some politics and specialized agencies. What about the civil society, the people and the whole economics actors who's by de facto, interacting with these ressources?

Many research programs demonstrate the needs to reinforce the social positive critics about these challenges to provide the sustainability of these ressources.

The NGO « bleu versant » propose, across wide public cultural and participatory actions to emerge this understanding.

Various forms are available: sight seeing, cultural actions and participatory movies, exhibitions, etc.

Finally, each year, the NGO propose to each pilote sites a focus to communications about the **world water day**. At last, the territories delegation pair presence allow the international notoriety.

REPRESENT FOR SUSTAINABLE ACTIONS

“Draw me a watershed in which I’m living!”

How it was yesterday ? How it is today?

Which look does it have tomorrow, and for **next generation**? The third target is to bring a complementary approach to the IWRM. From the land and the socio-cultural context diversity met, the NGO Bleu versant, like the « public writers », propose writing workshop and territorial perspectives. There's a triple objective from these workshop, opened to technicians and locals politics :

- To help to formalise the land evolution and the territory pilot watershed management by showing the water resources impacts (yesterday/today/tomorrow).

- It permit to local actors to mets them together on a federating theme and facilitate the coordination of operational actions from a wide public representation and transversal.

- Help to bind the local and international approach.

Finally, the last point is about to put in place a cell to follow and permit exchange between operational international actors to make a technical and institutional solidarity can be possible on these theme.

Examples

Conférences et Workshops pédagogiques
Conseils et formations spécialisés pour les enseignants

Création de support pédagogiques thématiques
Conception et diffusion de supports pédagogiques sur l'eau

Animation des atelier pédagogiques territorialisés
Coordination et animation pédagogique des ateliers

(*) Agréments Education Nationale / Jeunesse et sport (en cours)

Examples

Promenades collectives de bassin versant
Animation de visite pédagogique de bassin versant

Événementiels “journée mondiale de l'eau”
Scénographie et animation d'actions culturelles participatives

Réalisation de films “participatifs” sur l'eau et le territoire
Coordination et réalisation de films documentaires participatifs

Examples

Conferences and workshops with locals actors
Advices and specialized training (politics, technical services)

Local initiative realization assistance
Multiannual action plans realization assistance cell

Solidarity network realization and support
International pilot sites exchange network realization and support.
(France/ internationale)

(*) Environment protection agreement + training (on going)

Water- Millennium Development Goals (UNO – 2000)
Water- common good of human kind (UNO -2010)
United Nations International Year of Water Coopération (UNESCO-2013)

The international taken consciences acceleration of issues related to the water shows how much these resource management not only vital but required a territories sustainable integrated management.

The IWRM, « Integrated Water Resources Management» is an international model to permit to handle the water issues at the wide hydrographics watershed scale. This model, well know by all internationals experts, have practical application since 1996 in more than 150 countries. In 2009, the FOA publish a report called : **Why investing in the watershed management?**

The proof is the watershed scale approach and the ressource water management is a topical and future strategic challenge, particularly for **the next generations.**

This model reach some difficulties to stem the industrial development impacts, agricultural and urban on the water management. Those dynamics are often very quick and don't basically take in account the wide hydrographic watershed scales. The break between these top down internationals approches and these bottom up local dynamics appears as one of priority issue to accelerate the global improvement process on the water management. The fondations of the NGO bleu versant actions therefore aimed precisely to promote water management inclusion, from the local to the global, from these on going small watershed pilot territorial dynamics.

Through this **new approach, coming from a research and development program**, the NGO Bleu versant, contribute to find the fondamentale link between each person, is action territory and these impacts on the water resources. Due to the **articulation of these three poles of transdisciplinary skills** presented in this booklet, the actions undertaken by the NGO Bleu versant contribute to awarness, training, and coordinate local initiatives to improve a sustainable water management.

Finally, if our actions are carried out in complementarity with those led by national and international* wide hydrographic watershed organism chosen to act on the co-development principle from the pairing links or the existing cooperation between french and international territorial collectivities.

NGO bleu versant thus implementing a exchange network on these pilots experiences between french and internationals territories.

(*) INBO (International Network of Basin Organizations)

Bleu (blue): stand for water resources protection and valorization.

Versant (Shed): from watershed - the NGO scale are based on the watershed's natural limits.

co-development

Sustainable watershed development Network

Each action program engage sustainably a french collectivity and is foreign twins on the water theme. Progressively, each pilot territory benefits from the NGO internationals network experiences.
